

# Audi e-tron GT quattro\*

## The life cycle assessment

Image shows vehicle from the production year 2020 with optional equipment

\* Audi e-tron GT quattro, 350 kW: combined electric power consumption in kWh/100 km: **19.6 - 18.8 (NEDC)** or **21.8 - 19.9 (WLTP)**; combined CO<sub>2</sub>-emissions in g/km: **0 (NEDC)** or **0 (WLTP)**

# Life cycle assessment Audi e-tron GT quattro\*

AUDI AG prepares a detailed life cycle assessment for new vehicle models at the start of production.

In the following, the Audi e-tron GT quattro\* with the German standard equipment without additional optional equipment is considered.

## The methodology

The life cycle assessment (LCA) analyzes the environmental impact of a product throughout its life cycle (cradle-to-grave, see Figure 1). In a life cycle assessment for an AUDI AG vehicle, this is broken down into the following phases:

- **Production:**

Manufacture of the components (from the raw material to the finished component) and production of the vehicle model.

- **Usage:**

Use of a vehicle model based on a predefined driving profile (WLTP) with a mileage of 200,000 km including upstream processes from the fuel or energy supply.

- **Recycling** at the end of the product life.

Within the life cycle assessment on hand, only the ecological impact category of greenhouse gas potential is quantitatively assessed. Further explanations can be found below.

When preparing the life cycle assessment, AUDI AG follows the procedure standardized in the international series of standards ISO 14040 ff.

The following premises were used as a basis for preparing the life cycle assessment:

- Production year 2020, model year 2022
- Material data and component parts list of the examined vehicle model
- Combined energy consumption according to WLTP in 2020
- 200,000 km mileage in the use phase
- Testing and validation by independent experts (TÜV NORD CERT GmbH)

The life cycle assessment software GaBi version 9.5.2.49 was used.

## The results - global warming potential over the entire life cycle

The global warming potential (GWP) describes the emissions of greenhouse gases that lead to an increase in the heat absorption of solar radiation in the atmosphere and thus can contribute to an increase in the global average temperature. The reference substance for the global warming potential is carbon dioxide (CO<sub>2</sub>), to which all other active substances (e.g. methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), sulfur hexafluoride (SF<sub>6</sub>), volatile organic compounds (VOC)) are related (CO<sub>2</sub> equivalents - CO<sub>2</sub>-eq.).

The Audi e-tron GT quattro\* causes approx. 39.0 t CO<sub>2</sub>-eq. greenhouse gas emissions over its entire life cycle using the EU electricity mix (see figure 2). When using electricity from wind power, the greenhouse gas emissions are 22.4 t CO<sub>2</sub>-eq. In the production phase, the greenhouse gas emissions of the Audi e-tron GT quattro\* are around 20.7 t CO<sub>2</sub>-eq. and 0.9 t CO<sub>2</sub>-eq. are generated in logistics. The use phase of the Audi e-tron GT quattro\* accounts for approx. 17.0 t CO<sub>2</sub>-eq. in the electricity supply with EU electricity mix or 0.4 t CO<sub>2</sub>-eq. with green electricity, which corresponds to almost 45 % or almost 2 % of the total greenhouse gas emissions over the life cycle. There are no tailpipe emissions. The maintenance generates 0.5 t CO<sub>2</sub>-eq.. 0.03 t of CO<sub>2</sub>-eq. are generated during recycling.

Figure 2: Global warming potential of the Audi e-tron GT quattro\* over the entire life cycle

## Conclusion

AUDI AG is aware of its responsibility towards the environment by putting vehicles on the market and is committed to the Paris Agreement on climate change. As part of this, AUDI AG is pursuing a consistent decarbonization strategy. The data basis for this is formed, among other things, by the life cycle assessments of the various vehicle models from Audi AG.

The life cycle assessment of the Audi e-tron GT quattro\* was checked by the external expert TÜV NORD CERT GmbH. Evidence of the rule-compliant application of DIN EN ISO 14040 was provided and a declaration of validity was issued. Further information on sustainability at Audi AG can be found at [Consistent and holistic: sustainability at Audi | audi.com](https://www.audi.com/consistent-and-holistic-sustainability).
